Location: Sondrio, Italy

Interior Design: Fabio Gianoli

Photography: Claudio Pedrini

The top floor of a historical building, an old storeroom with a recent wooden ceiling. A free rectangular space at floor level and five arched window overlooking the square. A totally white surface, a tray where the client can place their loved belongings.

The floor plan was divided into symmetrical zones using both partition walls and furniture. All was planned around a suspender fire place made of natural metal sheet build on commission by STILFER of Sondrio. This fire place unites the kitchen area with the central isle - the dining area with a high quality wooden table ( made by Haute-Material ) - the tv zone -

the reading and relax area which is characterized by a small coffee table made out of an old car engine that belonged to the client.

At the entrance, behind the kitchen and dining table, were obtained a studio / closet and on the other side a bathroom with laundry facilities.

On the opposite side over the living area is the sleeping zone characterized by a wooden floor. Two symmetrical bedrooms are connected by a central corridor with mirror closet for shoes and the master bathroom. All the furniture was custom and personalized by BMitalia ([www.bmitalia.com](http://www.bmitalia.com))
